Paaree perfume

Introduction

The thirst for learning, upgrading technical skills and applying the concepts in real life environment at a fast pace is what the industry demands from IT professionals today. However busy work schedules, far-flung locations, unavailability of convenient time-slots pose as major barriers when it comes to applying the concepts into realism. And hence the need to look out for alternative means of implementation in the form of laddered approach.

The above truly pose as constraints especially for our students too! With their busy schedules, it is indeed difficult for our students to keep up with the genuine and constant need for integrated application which can be seen live especially so in the field of IT education where technology can change on the spur of a moment. Well, technology does come to our rescue at such times!!

Paarees perfume

Problem statement

Paarees Perfumes is selling various Perfumes from different brands. The company advertises by distributing the pamphlets, advertising on television and so on. Due to rapid development in internet field, the company decides to launch a website where people will get all the information about the various products available with them easily.

Paarees perfume

Synopsis

This project develops a web application for Paarees Perfumes using the eProject synchronous learning model, transitioning from basic concepts to a real-life application following a "laddered approach." The objective is to implement Dreamweaver and JavaScript concepts in a simulated real-world business scenario, creating a platform that showcases perfume brands. Paarees Perfumes needs an integrated website allowing users to filter products by brand and category, view summaries, access details via downloadable documents, and contact the company.

Hardware/Software requirements

Paarees perfume

Hardware requirements

- A minimum computer system that will help you access all the tools in the courses is a Pentium 166 or better
- 64 Megabytes of RAM or better

Software requirements

- A minimum computer system that will help you access all the tools in the courses is a Pentium 166 or better
- 64 Megabytes of RAM or better
